

CLAIMS

1 - 54 (Withdrawn)

55. (Cancelled) The collapsible warning device of claim 81 wherein said at least one panel is generally triangular in shape.

56. (Cancelled) The collapsible warning device of claim 81 wherein a bottom edge of the at least one panel is sewn onto the container.

57. (Withdrawn) The warning device 37 wherein the panels are adapted to be individually moveable between a first position in which the panels lie in the same plane and are substantially parallel to each other, and a second position in which the panels are adjacent each other at a top peripheral edge and spaced apart from each other at a bottom edge.

58. (Cancelled) The warning device of claim 81 wherein the at least one panel comprises reflective material.

59. (Previously Cancelled)

60. (Previously Withdrawn) The collapsible warning device of claim 58 comprising four panels.

61. (Cancelled) The collapsible warning device of claim 58 wherein the at least one fastener is a hook and loop fastener.

62 - 65 (Previously Withdrawn)

66. (Original) The collapsible warning device of claim 58 comprising three panels.

67. (Amended) The collapsible warning device of claim ~~58~~ 82 wherein select said panels have reflective material upon the periphery.

68. (Withdrawn) The collapsible warning device of claim 65 comprising at least one sleeve.

69. (Cancelled) The collapsible warning device of claim 58 wherein there are at least two panels, and the at least two panels have a shape that is one of triangular, hexagonal, octagonal or square.

70. (Previously Withdrawn) The collapsible warning device of claim 61 comprising two panels connected along an upper peripheral edge, a strap extending between the two panels, the strap connected to a bottom peripheral edge of each of the panels.

71. (Previously Withdrawn) The collapsible warning device of claim 68 comprising a sleeve in communication with the two panels.

72. (Currently Amended) The collapsible warning device of claim ~~69-84~~ wherein the at least two panels are adapted to lie in the same plane when in a storage configuration.

73 - 76 (Previously withdrawn)

77. (Cancelled) The collapsible warning device of claim 58 wherein the panels have a shape that is individually one of triangular, hexagonal, octagonal or square.

78. (Cancelled) The collapsible warning device of claim 58 further comprising a bag.

79. (Cancelled) A collapsible warning device comprising:
a container:

a pair of panels, one of said panels being connected to the container, and each panel being formed of at least one of cloth and flexible plastic formed of a mesh, cloth, or sheet material, each panel having a flexible wire frame around its perimeter to hold the panels in their erected form;

at least one fastener connected to one of the panels, for repeated engagement and disengagement of the at least one panel to the container;

and

whereby the panels may be erected upon the container, or removed for independent usage, as a warning device.

80. (Cancelled) A collapsible warning device comprising:
a container:

a pair of panels, one of said panels being connected to the container, and each panel being formed of at least one of cloth and flexible plastic formed of a

mesh, cloth, or sheet material, each panel having a flexible wire frame around its perimeter to hold the panels in their erected form;

at least one fastener connected to one of the panels, for repeated engagement and disengagement of the at least one panel to the container;

whereby the panels may be erected upon the container, or removed for independent usage, as a warning device;

and

wherein a bottom edge of at least one of the panels is secured by the fastener to the container, and the fastener is sewn onto the container.

81. (Cancelled) A collapsible warning device comprising at least one panel, a container, a fastener connected to the at least one panel, and said fastener being at the bottom edge of the at least one panel being sewn to the container.

82. (Newly Added) Collapsible warning device comprising at least one panel, a container, a fastener connected to the at least one panel, and said fastener being at the bottom edge of the at least one panel being sewn to the container;

collapsible warning device comprising three panels and three means for stabilizing the warning device individually connected to each of the three panels, the panels being operatively connected together along a side peripheral edge thereof, and being moveable between a first storage position in which said panels are substantially parallel to each other and to a face of the container, and a second position in which said panels are adjacent each other at their top peripheral edges and spaced apart from each other at their bottom edges to define a triangular pyramid.

83. (Newly Added) A collapsible warning device comprising a least one panel, a container, a fastener connected to the at least one panel, and said fastener being at the bottom edge of the at least one panel being sewn to the container;

said collapsible warning device comprising three panels, wherein at least one panel comprises reflective material.

84. (newly added) A collapsible warning device comprising at least one panel, a container, a fastener connected to the at least one panel, and said fastener being at the bottom edge of the at least one panel being sewn to the container;

said warning device having at least two panels, and the at least two panels having a shape that is one of triangular, hexagonal, octagonal or square, and wherein at least one of said panels comprises reflective material.
